SUMMARY

Full-Stack Developer with hands-on experience building production web applications and Web3 dApps. Proficient in Next.js, TypeScript, and blockchain technologies (Solana, Ethereum). Delivered freelance projects for real clients, architected scalable systems using microservices and event-driven patterns, and built developer tools used by the community. Passionate about clean code, system design, and shipping products that solve real problems.

EXPERIENCE

Full-Stack Developer (Freelance)

Jan 2025 – Present

Contract-based client projects

Remote

BloomKnot – Next.js, TypeScript, Cal.com, Better Auth, Prisma, PostgreSQL

- Architected and deployed a wedding coordination platform serving **50+ vendors** with real-time scheduling and booking management
- Implemented secure authentication flow using **Better Auth** with role-based access for admins, vendors, and customers
- Built automated email notification system using **Nodemailer**, reducing manual follow-ups by **70%**

Hyper Digital – Next.js, TypeScript, Cal.com, Framer Motion, Tailwind CSS

- Designed and developed a fully responsive, SEO-optimized agency website achieving **95+ Lighthouse score**
- Integrated **Cal.com** for automated client onboarding, reducing scheduling overhead by **80%**
- Collaborated directly with stakeholders to align UI/UX with business goals and brand identity

PROJECTS

Blind Chat – Next.js, TypeScript, Socket.io, Redis, Prisma, PostgreSQL

- Built a real-time anonymous chat platform for university students with **.edu email verification**
- Engineered WebSocket-based messaging using **Socket.io** with **Redis pub/sub** for horizontal scaling
- Implemented rate-limiting and spam prevention, handling **1000+ messages/minute** without degradation

FlowForge (Automation Engine) – Kafka, Turborepo, Next.js, Express, Prisma, Docker

- Created an open-source workflow automation platform with trigger-action framework and extensible connectors
- Designed event-driven architecture using **Apache Kafka** ensuring reliable message delivery with **zero data loss**
- Structured as a **Turborepo monorepo** with shared packages, enabling scalable microservice deployment

Solana Token Launchpad – React, TypeScript, Solana Web3.js, SPL Token

- Developed a Web3 dApp enabling users to launch custom SPL tokens on **Solana** with metadata and mint authority
- Integrated **Phantom** and **Solflare** wallets using Anza Wallet Adapter for seamless UX
- Implemented token creation flow with on-chain metadata storage and transaction confirmation handling

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Rust, Golang, C/C++, SQL, Bash

Frontend: React, Next.js, Tailwind CSS, Zustand, TanStack Query, Framer Motion

Backend: Node.js, Express, Hono.js, GraphQL, REST APIs, WebSockets, Prisma

Web3: Solana, Ethereum, Solidity, Web3.js, Ethers.js, Wagmi, Wallet Adapters

Databases: PostgreSQL, MongoDB, Redis, MySQL

DevOps: Docker, Kubernetes, AWS (EC2, S3, Lambda), GitHub Actions, Apache Kafka, Cloudflare

Tools: Git, Linux, Postman, Turborepo, Vitest, Jest

EDUCATION

Central University of Rajasthan

Ajmer, Rajasthan

Bachelor of Technology in Computer Science and Engineering

Aug 2023 – May 2027

- **CGPA:** 8.66/10 (Current)
